DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Figure 1 in the reply filed on 5/1/07 is acknowledged.
2. Claims 8-13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected embodiment, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 5/1/07.
3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Priority

4. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

5. The drawings are objected to because all diagrammatic blocks and features in Figures 1 and 4 are required to be distinctly labeled to indicate contents or function with legends (37 C.F.R. 1.83(a), 1.84(o)) since they are necessary for understanding of the drawing. Correction is required.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Sun et al (5,923,665).

Sun et al, in Figures 1-4, 6, and 7, discloses a memory controller for decoding a compressed/encoded video data frame using the same process for controlling an audio/video digital decoder 120 as specified in claims 1-7 of the present invention, comprising continuous acquisition of a digital audio/video stream 101, the digital video stream 101 being composed of an ordered sequence of images (Fig. 2); video decoding of all the images of the sequence 111; generation of a video signal based on only part of the images of the sequence (Fig. 2D); decoding the digital audio stream into an audio sequence 112 in synchronism with the video decoding.

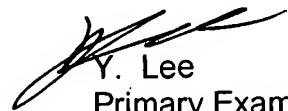

With respect to claims 2-7, Sun et al also discloses playing the audio sequence (Fig. 6); wherein the sequence comprises images of a first type and images of a second type and wherein the part is limited to the images of the first type (Fig. 2D); wherein the acquisition is a reading from a digital medium 604; wherein the acquisition is a reception of a digital stream (e.g. TV); and wherein the video signal is intended for display 607.
